

TEXAS AMONG THE NATIONS

- Texas has the 10th largest economy in the world ahead of 112 other independent nations.
- Texans send hundreds of billions of dollars to the Federal Government every year with billions more going to Austin. If that money were kept in an independent Texas, we would have the 13th most well-funded national government in the world.
- If Texas spent the global average of 4% on national defense, an independent Texas would have the 5th most well-funded military in the world.
- Texas is ranked 12th in the world for technology exports.
- Texas is a net global exporter ranking 22nd among nations of the world with 93% of those being manufactured exports.
- Texas is ranked 19th globally in farm and ranch acreage.
- Texas is the only state in the union with its own power grid.
- Texas ranks 40th in the world in terms of land mass.
- Texas ranks 47th in the world by population.
- Texas is the largest energy producing state in the United States.
- Texas generates more than half of the United States total domestic production of oil and natural gas and has the 7th largest coal reserves.
- Our 26 petroleum refineries account for more than one-fourth of all U.S. refining capacity. We are the largest chemical producer, with more than 200 chemical plants.
- Texas is also a global leader in wind energy production, ranking 6th in the world.

Texas has everything that it needs to be a nation among nations except one - its independence. Help us make it happen.
